

Felix 220

UV inkjet overprinting on pre-made labels. Compact and precise.

Speed

65 m/min

Unwind Ø

500 mm

Rental programme

from Gold

Technical data

Max. speed	65 m/min
Max. unwind Ø	500 mm
Max. rewind Ø	500 mm
Print resolution	600 DPI

Application and equipment

Business area	Print
Machine type	Standalone
Web width classes	120 mm (Desktop), 220 mm (Compact)
Applications	Digital printing (inkjet), Overprinting
Printing technologies	UV inkjet

Description

With the Felix 220, PrintsPaul has established a system on the market that allows pre-printed labels to be overprinted in exact register.

Using inkjet followed by UV curing, your designs are printed in deep black on suitable media. This machine stands out for simple operation and compact dimensions and needs only a 220-volt connection to run. Highlights include a web guide, touch panel, forward and reverse running, and a print width of 106 mm with a maximum roll width of 220 mm. With print speeds of up to 65 m/min, rolls up to 500 mm in diameter are processed quickly. The maximum achievable print speed depends on the application, print material and print data. TIF, PNG, BMP and JPG files can be processed, as well as variable data based on text, numbers, QR codes and barcodes.

The Felix 220 is a small all-rounder that considerably simplifies the production of labels that need to be overprinted later.

Highlights of the Felix 220:

- simple, intuitive set-up and operation
- precise overprinting thanks to mark control
- Web transport in both directions
- Inside and outside winding
- compact design
- only a 220-volt connection and compressed air required

RENT-TEST-BUY @PAUL

Rent the machine, produce under real conditions and decide afterwards. If you buy, part of the rent is credited.
