Description

The PrintsPaul Bruno is the perfect addition to your converter. The waste, which as standard is extracted by suction or wound onto a separate spindle, is shredded and compacted by the Bruno. This considerably reduces its volume, and it can be removed from the production area in blocks very easily using a trolley or pallet truck.

Controlled by the machine, the Bruno switches on and, once the work is done, off again. This not only reduces the noise level in production but also lowers energy demand.

The Bruno works with almost all types of our machines, making it the perfect helper for your production.

Highlights of the Bruno:

- simple operation
- compact design
- considerable reduction in waste volume
- automatic start and stop via signals from the connected machine

RENT–TEST–BUY @PAUL

Rent the machine, produce under real conditions and decide afterwards. If you buy, part of the rent is credited.
